

VERSION B CANDIDATE | DAD'S 2026 NOBO FIELD REFERENCE

MOUNTAINS UP + DOWN.

Every named mountain in the final 347.4 miles. The climb and the northbound descent now carry equal visual weight.

TRAIL AHEAD	NAMED MOUNTAINS	TOTAL CLIMBING	TOTAL DESCENT
347.4 mi	51	86.0k ft	83.3k ft

DOWNHILL WATCHLIST	Old Speck Mountain 9.9 Avery Peak 9.9 Goose Eye Mountain 9.7 Baldpate Mountain - West and East Peaks 9.7 Mount Madison 9.6
-----------------------	--

READ VERSION B: UP is the current movement score. DOWN is the knee-load screen. The higher number becomes OVERALL, so a consequential descent is never averaged away.

				NO POST-SUMMIT SEGMENT SCORED			
MI 2,191.9				SUMMIT 2,197.4			

DOWNHILL READ: The official AT and this calibrated dataset end at Baxter Peak. The required trip back down Katahdin is real, but it is outside this guide and is not scored here.

VERSION B METHOD

How the downhill screen works.

NOBO climb from the lowest calibrated elevation point after the previous listed mountain, capped at an 8-mile lookback.

NOBO descent from each listed summit to the lowest calibrated elevation point before the next listed mountain, capped at an 8-mile lookahead.

The 1-10 knee-load screen combines downhill feet per mile (30%), cumulative loss (25%), steepest descending grade (25%), and descent rockiness (20%).

Overall terrain demand is the higher of the existing climb difficulty and the knee-load screen, so a consequential descent is never averaged away.

Field caution: Terrain planning screen only, not medical guidance. Weather, wet rock, fatigue, pack weight, poles, pace, daylight, closures, and current trail conditions can materially change downhill strain.

Hoggcountry anchor-calibrated AT mile frame	Dense 20 m route-snap geometry generated from src/data/at-mile-anchors.yaml; no mountain mile is hand-entered. https://hoggcountry.com/at-map
USGS 3D Elevation Program	100 m elevation samples used for climb gain, loss, and grade screens. https://www.usgs.gov/3d-elevation-program
Scout Rockiness V2.1	Model screening from open terrain/OSM signals; not field verified. https://hoggcountry.com/at-map
OpenStreetMap contributors	Named peak coordinates and open AT route context, ODbL. https://www.openstreetmap.org/relation/156553

Candidate compiled 2026-07-30. Every displayed trail mile is re-derived from Hoggcountry's anchor-calibrated route; no mountain mile is hand-entered. The official AT dataset ends at Baxter Peak, so the separate exit descent from Katahdin is called out but not assigned a false score.
